Cost Offset of Treatment Services

There is a great paucity on nationwide data related to the cost benefit of substance use treatment. However, the limited research in some States suggests that there is a major benefit to substance use treatment. According to recent estimates, the total financial cost of drug use disorders to the United States is estimated to be $180 billion annually. The economic costs of alcohol abuse were 184.6 billion in 1998. Accessible and effective community-based alcohol and drug treatment is imperative to reduce society’s financial burden from problems associated with drug use. As the U.S. economy faces unsustainable escalations in health care costs, we need to ensure needed substance use disorder treatment and recovery programs help reduce health and societal costs.

The benefits of treatment far outweigh the costs. Even beyond the enormous physical and psychological costs, treatment can save money by diminishing the huge financial consequences imposed on employers and taxpayers.

Cost Savings of Treatment: California, New York, and Washington

Treatment has been shown to have a benefit-cost ratio of 7:1. The largest savings were due to reduced cost of crime and increased employer earnings (see Figure 1).

For every $100,000 spent on treatment, $487,000 of health care costs and $700,000 of crime costs were shown to be avoided.

Public Assistance in Washington

A comparison of medical expenses of Medicaid clients who received treatment noted these savings:

<table>
<thead>
<tr>
<th>Modality</th>
<th>Savings per Medicaid member per month</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inpatient</td>
<td>$170</td>
</tr>
<tr>
<td>Outpatient</td>
<td>$215</td>
</tr>
<tr>
<td>Methadone</td>
<td>$230</td>
</tr>
</tbody>
</table>

Spending money on treatment has led to important health and public safety cost reductions in Washington:

- Medical costs: $311/month
- State hospital expenses: $48/month
- Likelihood of being arrested: 16%
- Likelihood of felony convictions: 34%

Health Care Utilization Savings: California

Treated patients have been shown to reduce:

- ER visits by 39%
- Hospital stays by 35%
- Total medical costs by 26%

when compared to a control group.

Employers

Employees treated for substance use have:

- reduced absenteeism,
- reduced tardiness,
- lowered on-the-job injuries,
- fewer mistakes, and
- disagreements with supervisors by 75%
A study comparing the direct cost of treatment to monetary benefits to society determined that on average, costs were $1,563 compared to a benefit of $11,487 (a benefit-cost ratio of 7:1).

In an analysis of methadone detoxification patients (n=102), authors observed that for every dollar spent on treatment, $4.87 of health care costs were offset.

In comparing cost offsets in Washington State of people in treatment to non-treated, authors noted: lower medical costs ($311/month); lower state hospital expenses ($48/month); lower community psychiatric hospital costs ($16/month); reduced likelihood of arrest by 16%; and reduced likelihood of felony convictions by 34%.

In a study examining nearly 150,000 Medicaid claims for beneficiaries in six states, authors determined that people with substance abuse disorders had significantly higher expenditures for health problems compared to others.

In comparison of medical expenses for welfare clients in Washington State (n=3,235 treatment group and n=4,863 control) it was determined that substance abuse treatment was associated with a reduction in expenses of $2,500 per year.

In reviewing selected beneficiaries in Oregon's Medicaid program, researchers concluded that eliminating the substance abuse benefit led to increased medical expenditures.

A review of over 1,000 patients in a Sacramento chemical dependency program noted a substantial decline in hospital (35%), emergency room (39%), and total medical costs (26%) when compared to a control group.

A recent article on medical costs concluded that health care costs are higher for families with a person who has a dependency problem than for other similar families.

Employer Savings

An intake-to-follow-up assessment study of nearly 500 people treated at Kaiser Permanente's Addiction Medicine program demonstrated significant reduction in missed work, conflict with coworkers, and tardiness. It also noted that employers break even on investing in chemical dependency treatment.

Every $1 spent on addiction treatment saves $7 in crime and criminal justice costs. When researchers added savings related to health care, the savings-to-cost ratio was 12:1.
